

EPIC

Build and automate CI workflow for Healthcare Appointment Management Platform

FEATURES

- Appointment API Development
- Doctor Availability Tracking
- Patient Appointment Validation
- Application Monitoring
- Testing Automation
- Repository Management
- CI Pipeline Setup
- Build Verification

USER STORIES

- Patient checks appointment status
- Patient checks doctor availability
- Admin monitors application health
- QA validates APIs using automated tests
- DevOps automates CI pipeline
- Developer manages GitHub repository
- Administrator verifies successful build execution
- Developer monitors CI pipeline status after code push

TASKS

- Develop REST APIs using Flask
- Implement health-check endpoint
- Implement appointment-status service
- Implement doctor-availability service
- Configure automated testing using pytest
- Configure GitHub Actions CI pipeline
- Set up GitHub repository structure
- Implement dependency management
- Validate build execution after code push
- Monitor application service availability
- Automate pipeline execution workflow
- Verify successful test execution
