

Employee Salary Processing

Apache Airflow Setup Steps

Step 1: Open Killercode Ubuntu Playground

Open Ubuntu playground:

<https://killercode.com/playgrounds/scenario/ubuntu>

Step 2: Run Apache Airflow Container

```
docker run -d -p 8080:8080 --name airflow apache/airflow standalone
```

This command downloads and starts Apache Airflow using Docker.

Step 3: Check Running Container

```
docker ps
```

This command displays running Docker containers.

Step 4: View Airflow Logs

```
docker logs airflow
```

This command shows Airflow logs and login credentials.

Step 5: Open Airflow UI

Open port 8080 in browser and login using Airflow credentials.

Step 6: Enter Airflow Container

```
docker exec -it airflow bash
```

Step 7: Navigate to DAGs Folder

```
cd /opt/airflow/dags
```

Step 8: Create DAG File

```
cat > employee_salary_dag.py
```

Press:

CTRL + D

to save the DAG file.

Step 9: Verify DAG File

```
ls
```

This command checks whether the DAG file is created successfully.

Step 10: Restart Airflow Container

```
docker restart airflow
```

This reloads Apache Airflow and detects the newly created DAG.

Step 11: Verify DAG in Dashboard

Refresh the Airflow dashboard in browser.

The DAG:

```
employee_salary_processing
```

will appear in the Airflow UI.
